compacted 1" road base, crushed from either blue metal or basalt rock is all that is required for most gabion walls

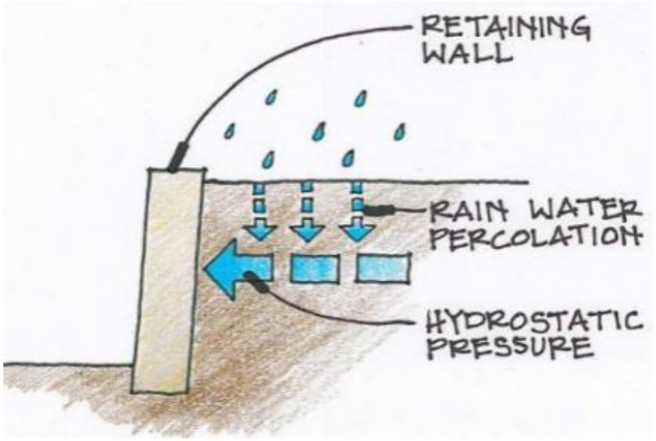
you can the create 6" or 12" stepped foundations to allow for changes in grade

Geotech filter fabric stops fine silts and clay migrating into the wall

The filter fabric ensures the gabion remains free draining, and eliminates hydro-static pressure behind the retaining wall.

Gabion retaining walls need adequate drainage

The design of the drainage system is just as important as the design of the retaining wall.



Small gabion walls under 3ft tall

Gabion walls over 3ft tall
