Overdose Trends in Burlington

Prepared 6/12/2015
Based on Data Reported to BPD

Year to date, there have been 30 overdoses in Burlington. This compares to the 37 overdoses for the entire year of 2014 and 34 in 2013. May saw a large spike in the number of overdoses.

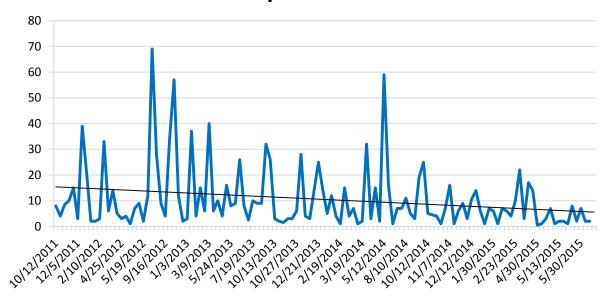

This pattern applies to Heroin overdoses as well. Of the 132 overdoses in this dataset, 44 (33%) are heroin overdoses. There were 10 heroin overdoses in 2013, 17 in 2014, and year to date in 2015, there have already been 15 heroin overdoses.

These charts demonstrate that the number of days between all overdoses, and heroin overdoses is decreasing. In the past year, we have not gone more than 25 days without an overdose. In the past year, the longest we have gone without a heroin overdose is 49 days (between incidents on 2/6/2015 and 3/27/2015).
