

Burlington Stormwater Program

Erosion Prevention and Sediment Control

Stabilization Certification

For the Project at address: _____

Description/Name of Project: _____

Erosion Prevention and Sediment Control Measures

I hereby certify to the best of my knowledge and in the exercise of my reasonable professional judgment that the following items have been completed in accordance with the Erosion Prevention and Sediment Control Plan approved by Burlington DPW.

Unpaved areas flatter than 3:1 slope (check all that apply):

- Have not yet been stabilized
- Stabilization measures have been installed and are being maintained (topsoiled, seeded and mulched)
- Final stabilization has been achieved (uniform grass growth over 70% or more of the disturbed surface area for lawn area and/or for landscape areas, planting with mulch cover is in place)
- Not Applicable

Unpaved areas steeper than 3:1 slope or windy areas alongside roadways (check all that apply):

- Have not yet been stabilized
- Stabilization measures have been installed and are being maintained (topsoiled, seeded and *protected with properly installed erosion control matting*)
- Final stabilization has been achieved (uniform grass growth over 70% or more of the disturbed surface area for lawn area and/or for landscape areas, planting with mulch cover is in place)
- Not Applicable

Impervious areas have been stabilized (paved or stable stone/ clean gravel surface):

Yes No N/A

Sediment control areas (catch basin protection, sedimentation areas, sumps, stormwater systems etc) have been checked and any sediment has been removed:

Yes No N/A

If Final stabilization has been achieved for all pervious areas, have sediment control measures been removed?

Yes No N/A

If the answer to any of the above questions is "No" please provide a separate attachment indicating when this work will be completed:

The site must, at a minimum, have full stabilization measures installed to be considered eligible for EPSC closeout. If Final Stabilization has not been achieved, the Burlington Stormwater Program reserves the right to postpone EPSC closeout until Final Stabilization has been achieved, but may be able to recommend that the project be eligible for a UCO based on the installation of proper stabilization measures.
