

North Avenue Travel Time Study

The CCRPC has collected travel time data on the four-lane section of North Avenue to provide a baseline or before comparison for the upcoming road diet pilot project. The data was collected from 7:00 - 8:30 AM and 4:30 - 6:00 PM for respective AM and PM peak travel times. This was conducted by traveling the corridor in a vehicle and recording the time in which it took to traverse the entire four-lane section. Time spent waiting at a red light or in a queue upon entering the corridor was included as part of the travel time. The following charts and tables display the data gathered.

PM Peak Travel Times (minutes : seconds)	
Direction	Average
Northbound	02:01
Southbound	02:11

AM Peak Travel Times (minutes : seconds)	
Direction	Average
Northbound	01:53
Southbound	01:59
