**Larger scale construction projects involving water main rehabilitation prior to paving. You will receive additional notification about these projects.*

Project schedules will be listed on our Construction Portal at burlingtonvt.gov/construction.

Schedules are subject to change.

Please contact DPW Customer Service for up to date information.

Now is the time to consider replacing water & sewer services –

Potential for cost savings for homeowners.

Water: DPW will be replacing galvanized water services in the roadway (main to curb stop) at no cost to property owners before paving. The cost of service work outside the roadway (curb stop to building) is 100% the responsibility of the property owner per city ordinance. Galvanized pipe is no longer used for water services because it is likely to break and reduce flow capacity over time. We offer free estimates and recommend property owners with galvanized pipe consider replacing the remainder of their service at this time. Please note, we offer flexible payment plans (e.g., interest free, 12 month terms) for waterline work. **You will receive a separate letter from DPW-Water, if our records indicate you have a galvanized or unknown service type.**

An example of corrosion in a galvanized waterline is below:

Sewer: The repair & replacement costs for sewer laterals are 100% the responsibility of the property owner per city ordinance. If your sewer lateral has never been assessed then we recommend hiring a contractor to video the pipe condition. We suggest this work take place now in order to minimize future disruptions to the roadway once paving is completed.

Deadlines: By **March 13, 2020**, we must have written notification of your intent to do water or sewer service upgrade work. Sewer service work must be completed by **June 29, 2020**.
